PROJECTS

TerraTech: Intelligent Crop Price Forecasting   Mar 2024 – May 2024
- **Project Description:** Developed a machine learning web application for intelligent crop price forecasting using Flask, TensorFlow, and XGBoost.
- Implemented **LSTM** and **XGBoost** models, and combined them into a hybrid approach for improved accuracy.
- Built an interactive Flask-based UI with data upload, model selection, and real-time forecasting features.
- Deployed dashboards with visual analytics for trend detection, market volatility, and policy recommendations.

TrendSage: Automated Market Insights Pipeline   Aug 2025
- **Project Description:** Built an automated system for **market research and competitor analysis** using APIs and AI-powered workflows.
- Integrated **Twitter, Google News, and Yahoo Finance APIs** for collecting real-time social, news, and financial data.
- Applied **OpenAI GPT-3.5** for sentiment analysis, competitor tracking, and generation of daily insights.
- Automated scheduling with error handling to deliver **daily reports** via JSON, Supabase, and formatted notifications (Slack/Telegram).
- Eliminated 8+ hours/week of manual research by providing **AI-driven market intelligence and recommendations**.

DevStream: CI/CD Pipeline with Jenkins and Docker   Jul 2025 – Aug 2025
- **Project Description:** Built a complete CI/CD pipeline project demonstrating modern DevOps practices with automated build, test, and deployment workflows.
- Implemented **Jenkins declarative pipeline** with GitHub webhook triggers for continuous integration.
- Containerized backend API using **Docker multi-stage builds**, improving security and efficiency.
- Automated **unit & integration testing** with Jest and Supertest, achieving over **50% code coverage**.
- Integrated **ngrok** for secure webhook tunneling and configured GitHub hooks for real-time triggers.
